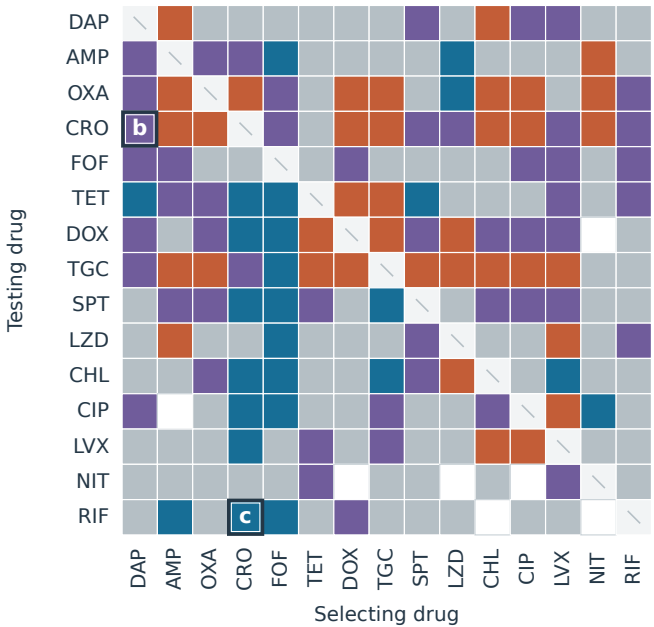
Sign agreement depends on the drug pair

210 directed pairs

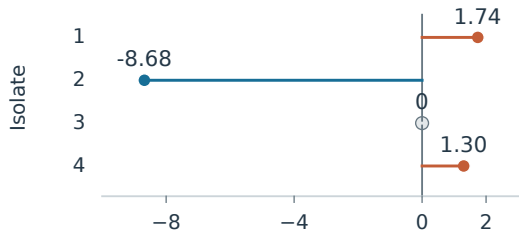
25	37	51	90	7
4/4 sensitive	4/4 resistant	Opposite signs	One sign + zero	4/4 threshold zero

a **Drug-pair map**



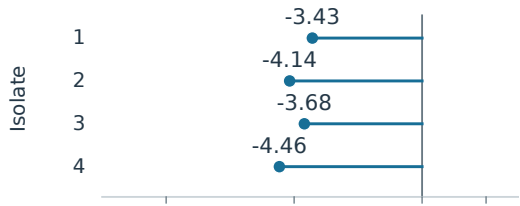
b **DAP → CRO**

Opposite signs across isolates



c **CRO → RIF**

All four more sensitive



$\log_2(IC_{50}$ / ancestor $IC_{50})$

Each map cell: four independent isolates. Diagonal: direct response, excluded.
Responses relative to the ancestor; counts are not future probabilities.
